

In the Specification

Please amend the "CROSS REFERENCE TO CO-PENDING APPLICATIONS" paragraph appearing at Page 1, Line 11, as follows:

CROSS REFERENCE TO CO-PENDING APPLICATIONS

This application is co-pending with Patent U.S. Application Serial No. \_\_\_\_\_ filed ~~October 23, 2001,~~ and 60/326,062, entitled "*DOCUMENT STORAGE AND CLASSIFICATION*" and Patent U.S. Application Serial No. \_\_\_\_\_ filed ~~October 23, 2001,~~ and 60/326,071, entitled "*ORDER ACCELERATION THROUGH USER DOCUMENT STORAGE AND REUSE.*"

Please amend the paragraph appearing at Page 29, Lines 6-32, as follows:

Intelligence module 47 may segment the third party document into sections such as header, footer, contact information for buyer, contact information for seller, date, quantity ordered, purchase price, subject, description, terms and conditions, and any other appropriate sections. Intelligence module 47 may determine which sections are generic and which sections are specific to the transaction between buyer 20a and seller 20a, buyer 20a and/or seller 30a may identify the generic sections, or the generic sections may be identified in any other appropriate manner. To create the generic document, intelligence module 47 removes from the third party document the information in the sections that is specific to the transaction between buyer 20a and seller 20a or that is confidential to either buyer 20a or seller 30a and leaves the information in the generic sections to the transaction. For example, in creating the generic document, intelligence module 47 may remove the name and contact information for buyer 20a and seller 20a, the quantity ordered, and the purchase price but still leave these sections in the generic document so buyer 20b can fill them in with their own information. Intelligence module 47 leaves in the generic document the sections and information for the headers, footers, description of the product, and the terms and conditions. As an alternative to removing confidential information, intelligence module 47 ~~may~~ may encrypt such information. Intelligence module 47 may also dynamically update the date section in the generic document with the current date information. Intelligence module 47 may also automatically and dynamically update the generic document with other current information such as the buyer and seller name and contact information if buyer 20b is a

registered user of system 10 and such information is readily available to intelligence module 47. To complete the generic document, buyer 20b or seller 30 may have to manually enter some of the information in the generic document such as the quantity desired and purchase price. Once the generic document is complete, buyer 20b can use the document to complete the transaction.
